## Precleaners

**Air Purification  
Technology for Cleaner  
Running and Longer Life**

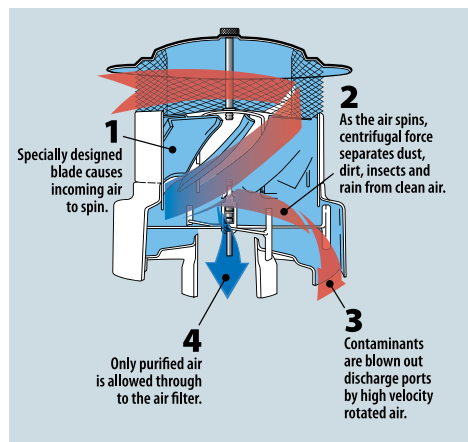

**Turbo Precleaners** remove up to 98% of the dirt, dust, rain and snow before it reaches the air filter. Air filter life can be extended by 8 to 10 times, while saving fuel, maximising power, and extending engine life.

### Turbo's 'Custom Balance'

Turbo units remove 50% more of the dust that other pre-cleaners allow through to the filter, while adding only half the air restriction.

There is no other unit, OEM supplied or after-market, that compares with the 'Balance' of Turbo's performance and engine protection.

### Micro-Abrasive Dust: the Most Damaging Dirt

Micro-abrasive dust consists of tiny silicone particles (less than 20 micron) which can severely damage engines and drastically shorten the life of OEM filters. Turbo Precleaners give your Tier III and Tier IV engines front line protection against damaging abrasive dust,

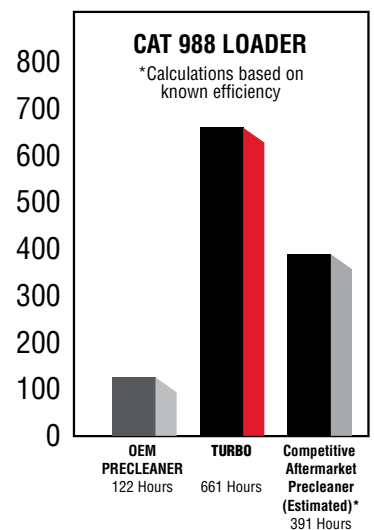

### The Turbo Range

There's a Turbo Precleaner to fit virtually any engine and application. Ask your authorised Turbo dealer for more information.

### More OEM Air Filter Life – Better Efficiency

Turbo Precleaners offer much more than conventional pre-cleaner technology, removing more contaminants, increasing OEM filter life and with much lower air restriction.
